## IDJ EVIDENCE EXHIBIT: SCPIDJK16-12466

**LOG TYPE:** Reconstructed Incident Timeline / Intelligence Synthesis

**ASSOCIATED CASE:** Alleged Homicide of Essential Personnel [REF: derrickc7]

**DATE OF ENTRY:** [REDACTED]

**EXECUTIVE SUMMARY OF INCIDENT** Due to the immediate and unauthorized intervention by STF Kappa-16 ("Sentinels"), ~~a standard forensic recovery was rendered impossible~~. This exhibit represents a reconstruction of events within the Site-81 Entrance Zone based on partially recovered server backups and off-site data mirrors. Evidence strongly suggests the unjustified ~~lethal termination of Maintenance Specialist derrickc7 and a subsequent multi layered effort by K 16 operatives to sanitize the site before IDJ investigators could establish a perimeter.~~

**RECONSTRUCTED EVENT CHRONOLOGY** Intelligence indicates Specialist derrickc7 was performing routine sanitary maintenance on the catwalk of the server room. Digital snapshots retrieved from the victim's bodycam—prior to its manual deactivation—show derrickc7 ascending toward the upper landing. Surveillance fragments show a door in the adjacent sector being opened by **Operative Exombit**. The operative initiated an aggressive, high-speed sprint toward the non-combative janitorial asset, closing the distance in less than two seconds.

**LETHAL ENGAGEMENT ANALYSIS** Despite the total lack of provocation, Operative Exombit halted his advance and discharged a Foundation-issue **Kriss Vector submachine gun**. The brutality of the engagement is noted as being highly irregular for a "Security Sweep," suggesting a targeted execution rather than a tactical error.

**POST-TERMINATION POST-INCIDENT NEGLECT AND OBFUSCATION** Following the kill, ~~Operative Exombit made no attempt to secure the body or report the discharge to Site Command. He was observed continuing his patrol into the next room, leaving the victim in the corridor. The body was later discovered by [REDACTED]~~, but before a proper investigative

chain of custody could be established, a detachment of STF Kappa-16 operatives arrived to "cordon off" the area. Following that, Operative Exombit discharged from K-16 shortly after the incident, although he continued his path as a DPI agent.

**SCENE SANITIZATION AND DATA SUPPRESSION** The IDJ asserts that the "securing" of the area by Kappa-16 was a pretext for a total scene wipe. By the time oversight arrived, all spent shell casings had been removed, and the victim's body had been ~~"processed" for transport in a way that destroyed primary ballistic evidence.~~ Furthermore, Operative Exombit was shielded from questioning. Following this, on the camera footage of the scene, Operative Exombit's bodycam seems to be off, adding on that the bodycam footage of the operative was never published.

#### SUPPLEMENTAL ADDENDUM: MEDICAL STATUS RECTIFICATION

[AMENDMENT TO EXHIBIT SCPIDJK16-12466] REVISED STATUS: Survival of Subject derrickc7 DATA SOURCE: Site-81 Medical Wing // Urgent Care Manifest [REF: MED-81-0422]

Contrary to initial field reports suggesting immediate termination, a recently declassified medical manifest indicates that Specialist derrickc7 was recovered in critical condition. Despite the high-volume discharge from Operative Exombit's weapon, internal trauma was stabilized by an emergency medical response team dispatched from the adjacent sector. This recovery occurred during the window in which STF Kappa-16 had cordoned off the corridor, explaining the initial confusion regarding the subject's vitals.

While the "Lethal Engagement" terminology has been partially retracted via strike-through, the IDJ maintains that the intent behind the operative's actions remained unauthorized. The subsequent medical intervention does not negate the initial use of unauthorized force, nor does it justify the sanitization of the server room landing. The subject has since been discharged from intensive care. The medical report has been publicly published by the Medical Department as #MDD-9003.
